

# POSTURAL OCULAR NEURAL SYSTEMS (PONS)

The genesis of PONS is propagated from an innate purpose and desire to advance the knowledge and technical certainty of the doctors in our profession with the vision to empower and improve the quality of our patient's lives.

## Part One – October 22 - 23

Basic: Dr. Horseman's basic seminar covers an overview of Functional Neurology related to spinal bio-mechanics with an emphasis on how posture affects brain function. The seminar will be presented in practical modules with hands on therapeutic treatment protocols including: posture analysis and correction, balance testing and therapy, gait analysis and therapy, vestibular analysis and therapies as well as an introduction to Eyalights and eye movement analysis. All of the material taught will offer practical material that you can transfer to patients the next day! A great seminar for those looking to own the material or are new to PONS!

## Part Two – November 26 - 27

Advanced: This seminar will stray from Part One as we delve deeper into Functional Neurology. We will expand on Part One and add an emphasis on the Mesencephalic Reticular Function with a focus on Movement Disorders. There will be review of concepts from Part One that pertain to the advanced seminar. If you are looking to grasp a deeper understanding and how to link the basics to your patients more clearly this is the seminar you want! As always PONS seminars are filled with hands on interactive demonstrations!

▶ If you have a case study to bring in please contact us! ◀

**Location:** Four Points By Sheraton Toronto Airport  
6257 Airport Road, Mississauga, ON

**Times:** Saturday 9 am - 6 pm, Sunday 9 am - 2 pm

**Instructor:** Dr. Ian Horseman

*For the past 23 years I have had the honor to work with some of the brightest doctors in our profession.*

*We have created an integrated system of enhanced neurological protocols and merged them with practical postural correction principals to develop PONS.*

*PONS in Latin means "gateway" which has been the focus as we create a new understanding and merge proven methods and present them in an easy to implement system.*

*These seminars are meant to teach you how to deal with patients suffering from many conditions such as: concussions, fibromyalgia, headaches, anxiety and depression, and many more. This is done through a combination of advanced Functional Neurology and posture correction protocols.*

*Dr. Ian Horseman*
